

## ARC Tabitha Roof Replacement

The roof on Tabitha needs to be replaced / redesigned. The current configuration has runoff water and snow falling directly onto the upper deck and in turn the lower room entries. This project would extend the roof line east and west enough to cover the deck and lower room entries. The lower walk path would be relocated to be below the roof line. The north and south roof lines would also be extended to prevent the same issue. Gutters and down spouts will also be installed to prevent soil erosion below the roof line.

"Come Away & Rest Awhile"  
- Mark 6:31

When the roof is being extended new insulation will be installed and venting of the attic portion will be enhanced to prevent ice dams from forming in the future that are damaging the lower deck.

Here are a few pictures of the damage sustained from ice dams this year. This roof develops these annually and damage the deck when they come down.

The cost of this redesign project will be around \$250,000. It will prevent further damage like we have had this year. It will make the building safer for guests heading to their rooms. It will save many man hours on salting and removal of ice and snow.

Please pray about th endeavor for finds to come in. Also be in prayer as to what the LORD may lead you to do. Thank you for all of your prayers andfinical support.
