SKID-LIFT FOR THE ARC

The ARC currently has a Lull lift that is used to access most of the vertical heights on the property. It operates, but due to age and use it needs repairs to get it back into safe operating condition. Because of its age, size and lack of maneuverability it is difficult to use around the ARC. It also damages the lawn in the process.

Skid-lift Model 2230S

This model includes side attachment plates for stabilization. There are controls in the basket as well as at the base. It has safety bypass relief buttons both at the top and the bottom of the lift. It has a lift height of 22 feet to the top of the platform which gives a working height of 28 feet. This lift attaches to the skid loader that the ARC already has.

Acquisition of this lift will enable the ARC staff to work safer and be more mobile while working on projects high above the ground here at the camp. The cost of this unit is \$14,000.00. Please pray about this opportunity to see if the Lord would lead you to help make this a reality. Thanks for your support and your prayers for the ARC.
