

## Tabitha Roof Replacement

The roof on Tabitha needs to be replaced / redesigned. The current configuration has runoff water and snow falling directly onto the upper deck and in turn the lower room entries. This project would extend the roof line east and west enough to cover the deck and lower room entries. The lower walk path would be relocated to be below the roof line. The north and south roof lines would also be extended to prevent the same issue. Gutters and down spouts will also be installed to prevent soil erosion below the roof line.

When the roof is being extended, new insulation will be installed and venting of the attic portion will be enhanced to prevent future ice dams from forming that are damaging the lower deck. Here are a few pictures of the damage sustained from ice dams this year. This roof develops these annually resulting in damage to the deck when they come down.

The cost of this redesign project will be around \$265,000. It will prevent further damage like we have had this year. It will make the building safer for guests heading to their rooms. It will save many man hours on salting and removal of ice and snow.

Please pray about the endeavor for funds to come in. Also be in prayer as to what the LORD may lead you to do. Thank you for all of your prayers and financial support.
